After I run an update I get an error message and the program doesn't run.

The issue is likely that the update did not complete or there was a problem installing the update.
To repair the installation, simply follow the steps below – read carefully!

Steps:

1) Download the latest update and SAVE it somewhere on your computer where you can quickly find it to run it.
Do <u>NOT</u> run it yet.

You can download the latest update on this web page:
https://www.bradleysoftware.com/software-updates.asp

2) Close all programs and reboot the computer.

3) AFTER it reboots, log in - Do NOT run the KS Child Support program - instead, run the downloaded file you saved in step 1.

Now you can run the program.
